fateennjb.i@gmail.com • +6282249385927 • [linkedin.com/in/fateen-indramustika/](https://www.linkedin.com/in/fateen-indramustika/)

Software engineer with 3 years experience on cloud-native architecture, backend systems, and AI integration. Develop and maintain leading online travel agents in Southeast Asia with 40+ million active users. Interested in integrating AI to user journey for better experience especially pricing. Increased attraction product net revenue with dynamic pricing based on user segmentation.

EDUCATION

UNIVERSITAS INDONESIA

Bachelor, Computer Engineering. GPA 3.87/4.0

Depok, Indonesia

2020 – 2024

- Mata Air Biru scholarship
- Coordinator and assistant for network laboratory

EXPERIENCE

TRAVELOKA INDONESIA

Software Engineer II - Full-time

South Tangerang, Indonesia

January 2026 – Now

- Built AI-driven product matching system in our pricing system, achieving **94% GMV coverage** and improving product competitiveness
- Led AI enablement initiatives, integrating agentic AI into business workflows to enhance automation and decision-making
- Mentored junior engineers, improving code quality and system scalability through best practices in development
- Developed new connectivity funnel, increasing user conversion (take-up rate) by **30%**

TRAVELOKA INDONESIA

Software Engineer - Full-time

South Tangerang, Indonesia

October 2024 – January 2026

- Built internal Open Feature Provider used by **20+ services**, improving feature rollout control and reducing misconfiguration incidents by **35%**
- Integrated AWS Bedrock for AI-based product selection, increasing recommendation accuracy by **28%**
- Executed cross-account AWS migration (services, RDS, SQS, VPC) with **near-zero downtime (<2 minutes)** using blue-green deployment strategy

TRAVELOKA INDONESIA

Oracle Engineer - Intern

South Tangerang, Indonesia

October 2023 – October 2024

- Established mono-repo and DevOps pipeline for Oracle database customizations, automating deployments via GitHub Actions with self-hosted runners on AWS EC2
- Built ETL pipeline to extract data from Oracle EBS to AWS S3 for analytics and dashboarding
- Developed and maintained Oracle EBS customizations and automation, including user lifecycle integration with Workday, reducing manual effort by **~1 day/week**, and automating netting processes to accelerate monthly financial closing

TAIWAN EDUCATION AND EXPERIENCE PROGRAM

Real-Time Lab Research Assistant at NTUST

Taipei, Taiwan

April 2023 – August 2023

- Engineered 5G system enhancements using open-source stack (Free5GC, OAI, DPDK, xApps) to optimize bandwidth utilization
- Built and deployed end-to-end 5G system (Core + RAN) within Kubernetes and Docker environment for experimentation and validation
- Proposed patent to accelerate OAI packet processing using DPDK-based data plane optimization

TELKOM INDONESIA

Data Engineer - Intern

Work from Anywhere
January 2023 – June 2023

- Managed MySQL databases (40+ tables, 100+ columns), ensuring data integrity and reliability for analytics use cases
- Built and maintained 6+ data automation pipelines to deliver timely datasets to analyst teams
- Conducted transaction analysis and fraud investigations for Sooltan app, providing actionable insights and recommendations to stakeholders

CERTIFICATIONS

GOOGLE CLOUD PLATFORM

Associate Cloud Engineer

Jakarta, Indonesia
2023

TOEFL ITP

English Test (Score: 573)

Jakarta, Indonesia
2024

PROJECTS

NETPRO

Software Engineer

Jakarta, Indonesia
October 2023 – March 2024

- Designed system architecture for high-performance packet filtering and TCP connection termination
- Built a C-based packet processing engine (15+ functions) using DPDK and Hyperscan for kernel-bypass acceleration
- Achieved up to **1 Gbps throughput** using HugePages and user-space networking optimizations

WEBSITE LABHUB

Project Manager

Jakarta, Indonesia
June 2023 – July 2023

- Led development of a lab equipment rental platform with integrated payments via Xendit, managing a team of 6 to deliver on schedule
- Built full-stack system using Strapi, React, and PostgreSQL with AWS S3 for storage, focusing on scalability and maintainability
- Established multi-environment setup (dev, staging, prod) with CI/CD pipelines deployed on Google Cloud

WEBSITE OPEN HOUSE FFUI

Project Manager

Jakarta, Indonesia
July 2022 – August 2022

- Led development of a multi-feature web platform (registration, ticketing, merchandise, competition), serving **1,000+ visitors** and **200+ active users**
- Built full-stack system using Strapi, React, PostgreSQL, and AWS S3, ensuring scalable and maintainable architecture
- Managed delivery using Notion and implemented CI/CD with GitHub Actions, deploying to Google Cloud
